The screenshot shows the Chrome DevTools Application tab. On the left, the 'Storage' panel is expanded, showing 'Local storage' for 'http://localhost:5173'. The 'cart' key is selected, showing an empty array value. On the right, the 'Application' tab shows the URL 'http://localhost:5173' and the 'Origin' 'http://localhost:5173'. Below this, a table shows the 'Key' 'cart' and the 'Value' '[]'. A red arrow points from the 'cart' key in the table to the 'cart' key in the console log. Another red arrow points from the 'JSON.stringify([])' in the console log to the 'Value' '[]' in the table. A red text annotation 'JSON.stringify() use korar por empty array show korbe' is present. The console log shows the following code:

```
> localStorage.setItem('cart', '1234')
< undefined
> localStorage.setItem('cart', [])
< undefined
> localStorage.setItem('cart', JSON.stringify([]))
< undefined
```

6

```
> []
< ▶ [] ekhane normal array akta object hisebe kaz kore
> JSON.stringify([])
< '[]' ekhane JSON.stringify([]) use korle eta string hisebe kaz koreba convert kore
>
```
